ANGLE ROLLS

CONTACT US

ROUND0 R Series

ROUND0 is the leading brand of section bending machines.

It covers section modulus from 0.85 to 675 in³.

ROUND0 machines are readily adapted to handle a variety of bending jobs. The larger models are optimized for hard-way beam bending.

FACCIN RCMI Series

The RCMI range angle rolls have a sturdy, generously sized structure able to assure maximum reliability and bending precision.

The large set of rolls, supplied as standard equipment, allow the rolling of beams, columns and channels rolled on edge.

PLATE ROLLS

FACCIN 4HEL Series

Highly technological and innovative 4-roll Double Pinch Plate Roll with Linear Guides configuration.

The 4HEL series is the most precise and easiest to use 4-roll bending roll with total pre-bending.

Ideal solution for thicknesses varying from 3/16" to 6". Optimal technology to be equipped with a SIEMENS CNC Control.

FACCIN HAV Series

High rolling power combined with maximum pre-bending precision.

HAV is the series of 3-roll variable geometry bending rolls at the highest level of its category by performance and versatility.

Ideal for medium and heavy-duty rolling requirements (from 1.5" to over 12" thickness).

FACCIN 4HEP Series

4-roll Double Pinch Plate Roll with Swing Arm configuration.

4HEP bending rolls with exclusive SIEMENS CNC – designed and built by Faccin – are the most reliable cutting-edge rollers available amongst all rolling machines with planetary technology in today's market.

Ideal solution for thicknesses varying from 3/16" to 6".
